

A Guide To The New Rules On Tax Deductions In 2018

Uncle Sam giveth, and Uncle Sam taketh away. The new federal tax code, which went into effect in 2018 and affects the return you'll file in spring 2019, lowers taxes by expanding some deductions, but restricts or outright eliminates others.

Deductions lower your taxable income so you pay less tax. Here's how deducting items from your income were expanded, restricted, or eliminated.

Tax Planning 2018

Here's a guide to how the new rules expand some deductions, but restrict or eliminate others.

EXPANDED DEDUCTIONS

Standard deduction. The standard deduction is the amount you can subtract from your taxable income if you don't itemize — that is, individually deduct items like mortgage interest, charitable donations, and car loans. Nearly doubling the standard deduction to \$24,000 for joint filers and \$12,000 for singles pushes it up from \$12,700 and \$6,350, respectively. Fewer than half of taxpayers who itemized their 2017 return are expected to itemize their 2018 return. If you file using the standard deduction, preparing your return will be much simpler. If the standard deduction is less than the total of your itemized deductions, you'll still want to file by itemizing, subject to the rules below.

Medical expenses. If you itemize deductions, medical expense deductions

will be more generous. For tax years 2017 and 2018, medical outlays in excess of 7.5% of your adjusted gross income are deductible. Starting in 2019, the threshold rises to the previous level of 10%. Congress is widely expected to consider extending the 7.5% threshold or making it permanent.

Alternative minimum tax. This very unpopular parallel tax system has been reined in and will zap fewer Americans in 2018. The AMT started in 1982 as an effort to reduce loopholes open to ultra-high-income earners, but its net gradually spread and it affected more individuals. In the 1990s, Congress hiked the AMT tax rate, stiffening its cost. Under the AMT, the standard deduction and deductions for state and

local income taxes are lost. With the new law, your exemption — the amount you can subtract from your AMT liability — is much larger. Previously, \$54,300 was exempt for a single-filer and \$84,500 for a married couple filing jointly. Respectively, the exemptions increased by almost a third, to \$70,300 and \$109,400.

Child tax credit. This actually is not a deduction against your income. It's a credit on your tax bill. A credit reduces your tax bill dollar for dollar. The credit for children under age 17 was raised to \$2,000 from \$1,000.

RESTRICTED DEDUCTIONS

State and local taxes. Lawmakers placed a \$10,000 cap per return on deductions for state and local taxes (SALT). Till now, the amount you could

Good Riddance To The Alternative Minimum Tax

Perhaps the most despised federal levy is the alternative minimum tax, which Congress passed in 1969 to prevent the loophole-savvy ultra-wealthy from shortchanging Uncle Sam.

Over the years, AMT's reach expanded to include households with more than \$200,000 in AGI (adjusted gross income) annually and two-earner couples with children in high-tax states.

Under the new tax law, starting in 2018, the AMT's damage radius is reduced considerably. This alternative tax calculation still requires some individuals to calculate their tax bill twice — under regular rules and then the AMT's, and pay the higher sum. In 2018, though, a fraction of tax-filers will fall into the clutches of the dreaded AMT.

With the tax code rewritten, only about 200,000 tax filers are expected to be required to pay the AMT in 2018, way down from the 5.25 million, according to the Tax Policy Center.

Congress increased income exempt from the AMT calculation. This expands to \$109,400 for joint filers, up from \$84,500, and to \$70,300 for individuals, up from \$54,300.

The happy outcome is that the changes permit many more households making more than \$200,000 to bid the AMT a not-so-fond farewell.

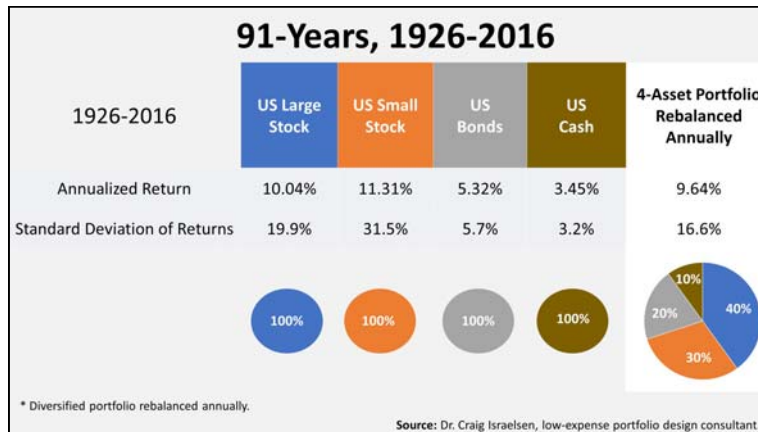

Investing For The Long Run Amid Volatility

With stocks surging one moment and plunging the next, it's good to remember that, from 1926 through 2016, a portfolio diversified across stocks, bonds and cash averaged a 9.6% annual return, with a better risk-reward ratio than any one of the four investments with large liquid markets.

Ninety-one years goes back to when stock returns were first recorded on Wall Street, but most people don't invest for 91 years. The bar chart shows returns of the four investments versus the diversified four-asset portfolio over more realistic holding periods.

Over 35 years, large-company stocks beat their long-term average return over 91 years in a whopping 88% of the 35-year rolling periods! In contrast, over all of the 10-year rolling periods between 1926 and 2017, large-company stocks beat their 91-year return in only 46% of the 12-month rolling period.

In addition, the longer you stayed in the diversified portfolio, the more likely you were to experience the 91-year results. While holding

the diversified portfolio for five years beat the 91-year return of 9.6% in 56% of the 12-month rolling periods over the 91 years, holding the four-asset portfolio for 35 years beat the 91-year results in 88% of the 12-month rolling periods.

Diversification neither assures a profit nor

guarantees against loss in a declining market and past performance is not a guarantee of future results, but these results show that the longer you invest, the more likely you are to experience the 91-year return and risk statistics.

Recently, volatility surged after investors were spooked by rising inflation and lending rates, and growing concern over the long-term U.S. debt. Statistically, the chance of a bear market decline of 20% or more increases as the eight-and-a-half-year bull market grows older, and the new tax law increased the chance of a Federal Reserve interest-rate policy mistake quashing growth for allowing inflation to surge. Fed mistakes caused every recession in post-World War II history.

However, earnings drive stocks and earnings expectations have recently surged. When the tax law was signed on December 22, 2017, the average company in the S&P 500 was expected to earn \$131 a share in 2018, but that was revised to \$152 and could be boosted again.

S&P 500 operating

earnings per share as of February 7, 2017 were \$132.40 for 2017, \$155.26 in 2018, and \$170.93 in 2019, according to data from Yardeni Research, Inc. and Thomson Reuters I/B/E/S. According to independent economist Fritz Meyer, 2018 and 2019 estimates were revised up in December 2017 from, respectively, \$146.19 and \$160.69.

With real wages continuing to grow, consumers are spending and consumers account for 69% of economic growth. So, despite the recent correction, the bull market and economic expansion could strengthen and last many months longer. ●

phishing email, the reply address at the top left says "Microsoft support," but if you look closer, the reply email address is "support@simpur.net.bn" and that is not a Microsoft address. The "bn" suffix is the internet country code for Brunei, and that's another telltale sign of fraud. Clever phishing emails often fake reply addresses in other ways. The easiest way to verify a reply email address is to double click on it and look at its properties. If the email purports to be from Microsoft or Google, will hitting reply send an email to a Microsoft or Google email account? If not, it's fake.

Links. Don't click on links in a suspicious email without being deliberate. The link could be a malicious website. Right click on the link and check

its properties and see if the link goes to the company.

Slow down. The grammar, misspelling, bad links, and other telltale signs are easily overlooked when you're in a rush, and that's perhaps the reason why people become ensnared by phishing emails.

Verify before you trust. Trust but verify works for some things but not with internet security. First verify and then you can trust.

Secure Software. Microsoft and Apple release updates to computer operating systems continually and those are essential to staying secure. Anti-virus and anti-malware programs are also essential and they need to be kept updated with the latest fixes. ●

Understanding Economic Fundamentals

At 105-months-old, this is the second-longest economic cycle in post-World War II America. For the last couple of years, a new phase of the expansion marked by rising interest rates began. Shifting fundamentals underpinning the economy can cause jitters in investment markets or spark changes in sentiment. In fact, the most recent correction — a loss of about 12% — was caused by fears of rising interest rates and inflation. So, let's set the record straight.

While no one can predict the stock market's near-term ups and downs, what we do know is that history shows rising rates are not bad for stocks. Actually, rising bond yields have often coincided with bull markets in stocks. The red arrows point to five periods since the 1990s when the yield on the 10-year U.S. Treasury bond rose sharply and stock prices rose at the same time.

A more reliable economic and financial indicator is the yield curve — the difference

between long-term bond yields and short-term interest rates. When the difference between the yield on 10-year U.S. Treasury Bond and the 30-Day U.S.

Treasury Bill is more than zero, an expansion could continue just fine. However, when the yield curve is inverted — when a 30-Day Treasury yields more than a 10-year Treasury — that has been bad for the economy and stocks. Before each of the last three recessions, the yield curve went into negative territory.

Currently, the yield curve isn't near inversion. It's not signaling an end to the eight-and-a-half-year expansion and bull market. This 105-month old economic expansion is approaching the length of the longest expansion, the 120-month cycle in the 1990s, and it's still got legs. Of course, indicators are not a guarantee and must be considered in the context of history and your personal situation. But the yield curve is key to watch as this expansion nears the 120-month longest-ever cycle in the 1990s. Please let us know if you'd like to receive our email newsletter about wealth management. ●

Tax Deductions In 2018

(Continued from page 1)

deduct for SALT levies was unlimited. If you live in a place with high state and local taxes and home prices, you're hit hard. If you earn more than \$100,000 in adjusted gross income and live in California, Connecticut, Maryland, New Jersey, New York or Oregon, you're very likely to see a material hike in your annual federal tax liability for at least the next decade.

Mortgage interest. You can continue to deduct this interest for first and second homes. The change: For mortgages dated after Dec. 14, 2017, only the interest on the first \$750,000 of debt is deductible. Before that date, the \$1 million ceiling still applies. In places where home prices and, thus, mortgages, are low, that is not as much of a concern.

In high-price locales, it is.

Home equity interest. You no longer can deduct interest paid on home equity loans, unless it is used to improve the dwelling. Many people use such loans, which are secured by their homes, to pay for college tuition or new cars. If a home equity loan and the mortgage totals more than \$750,000, the amount over that limit can't be deducted.

ELIMINATED DEDUCTIONS

Personal exemption. Exemptions, which lowered your income by \$4,050 per person — usually family members — are gone. For some families with children over 17, who can't take advantage of the expanded tax credit, the elimination of the personal exemption will be a net loss.

Alimony. For divorce and separation agreements made after 2018, alimony payments will no longer be deductible. The deduction is helpful to a paying ex-

spouse who is short on funds.

Casualty and theft losses. If your house burned down or a crook took your wallet, you could deduct the loss not covered by insurance to the extent it exceeded 10% of your income. Under the new law, only casualty losses suffered in a natural disaster declared by the president are deductible.

Job expenses. Continuing education, medical tests and licensing fees previously were write-offs. Not anymore.

Moving expenses. Before, you could deduct these if you moved to start a new job and it was a good distance (that varies by circumstances, but typically meant 50 miles away) from your old home. Now, that is gone, unless you are in the military.

Tax prep. Depending on the complexity of the return, these fees can amount to more than \$500. Uncle Sam no longer will let you deduct them, though. ●
